

SEDE MAHOU

Madrid, Spain

All facades have state-of-the-art coated glass with high energy performance. Towards the M-30, a double skin of self-supporting perforated extruded aluminum profiles has been used for acoustics. The south-east facing façade has a good solar factor, protecting the façade from the most continuous radiation. Apart from the environmental criteria, from an aesthetic point of view, the aim was to protect the façade from direct views of the adjacent high-density road traffic.

ARCHITECT: Galan - Lubascher
CLIENT: Lena Construcciones SA
TYOLOGY: Pasive CW S70
SURFACE: 12.000 m²

"The modular system was chosen because of its versatility to include the different additional systems, placed at the same time as the module, which has an impact on the speed of its execution. On the other hand, a structural silicone solution was chosen to enhance the continuity of the envelope".

Lucas Galán Lubascher
